SUMMARY

Full-stack engineer with 5+ years of experience and a strong focus on front-end development. Currently working at Allstacks building a software engineering analytics platform used by companies to analyze and optimize software delivery.

SKILLS

Languages: JavaScript, Typescript, HTML, CSS, SQL

Technologies: React.js, React Native, Vue.js, Tailwind, Redux, Node.js, Jest, PostgreSQL

EXPERIENCE

Frontend Engineer – Allstacks

May 2025 – Present

US-based software engineering analytics platform used by companies to optimize software delivery.

- Led Vue 2 → Vue 3 migration initiatives, standardizing module architecture (queries/services/composables) and improving long-term maintainability.
- Built complex AI-driven user experiences involving long-running asynchronous workflows, contextual data visualization, and collaborative planning interfaces.
- Develop and maintain complex front-end features in the Data Explorer analytics product.
- Implemented a cache system that reduced redundant API calls and improved app responsiveness and user perceived performance

Frontend Engineer – Capim

Dec 2023 – May 2025

Fintech platform providing credit solutions for dental clinics.

- Refactored the entire front-end of the credit request flow (the company's main service), which impacts thousands of people and handles millions of reais every month
- Migrated the application architecture from Vue Options API to Composition API, improving scalability and maintainability.
- Designed and implemented a scalable Design System with strong accessibility practices.
- Delivered critical front-end features that contributed to customer acquisition and retention.
- Increased reliability of core flows through unit and end-to-end testing.
- Mentored junior developers and interns, promoting code quality and best practices.
- Led Front-End Guild initiatives focused on engineering standards and continuous improvement.

Frontend Engineer – Petlove Tech

Sep 2022 – Nov 2023

Technology platform supporting one of the largest pet care ecosystems in Brazil.

- Developed and integrated new front-end features that improved usability and system performance.
- Increased code reliability through automated testing with Jest and Vue Test Utils.
- Participated in dependency modernization and framework upgrades to maintain long-term stability.
- Collaborated with cross-functional teams to deliver scalable and user-focused solutions.

Software Engineer – Bhut

Jan 2022 – Sep 2022

Digital banking platform focused on web and mobile applications.

- Developed new features for a digital banking platform, including Pix-related flows used in daily financial operations.
- Built front-end interfaces for web, mobile (React Native), and back-office systems.
- Implemented user-facing features with focus on usability and reliability.
- Maintained and improved existing application flows.

Software Engineer – Conpec Jr (Junior Enterprise)

Mar 2021 – Apr 2022

Student-led technology consulting organization.

- Developed front-end features using HTML, CSS, JavaScript, React, and Firebase.
- Built an internal HR management platform used to organize company members and operations.
- Contributed to the development of an English-learning platform for an external client.
- Worked in an Agile environment using Scrum practices and Git-based version control.

EDUCATION

Computer Science (BSc.) – Unicamp

2020 – 2025 (Incomplete)

EXTRACURRICULAR ACTIVITIES

Volunteer Work – Olá Mundos

A project that offers a free basic programming course to 11–14 year old students from public schools across Brazil.
